Description

The ROVI Power Wheelchair Base has the narrowest wheelbase in the industry and combines advanced functions and applications, durability and good looks.

It passes with success the high curbs, obstacles and 14° angle ramp tests.

Its powerful 4-pole motor together with PG Drives Technology enhance the ride experience.

Innovation: Instead of distributing the weight equally on the power base, we have designed it to be concentrated on the heaviest part – the batteries, thus providing a significantly better stability, comfort and quality in the driving experience together with the Active Ride Control Suspension System (ARC).

Available in 9 colors.
